Manifold Learning via Conditional Entropy Minimization: Euler-Lagrange Derivation

Shashank Singh

sss1@andrew.cmu.edu

1   Introduction

$f(x_1) = 0, f(x_n) = 1.$

$L(t, x, v) = p(t, x) \left(\log p(t, x) - p(t) \right)$ or $L(t, x, v) =$
